

PROJECT NAME: Heart Disease Analysis using Tableau

Email: thiragatisuryasri@gmail.com

DASHBOARD SCREENSHOT:

The Heart Disease Analysis Dashboard provides an interactive visualization of patient demographics, lifestyle factors, and clinical indicators. It enables users to analyze heart disease patterns, compare health-related attributes, and identify high-risk groups using interactive charts, KPI cards, and filters.

Dashboard 1 – Dashboard Home

Provides a comprehensive overview of heart disease analysis through KPI cards, interactive charts, filters, and summary visualizations.

Dashboard 2 – Health & Disease Analysis & Demographic & Risk Analysis

Focuses on health-related indicators such as heart disease status, stroke cases, BMI, diabetes, and physical activity to identify disease patterns. Analyzes demographic factors such as age, gender, smoking habits, and lifestyle risks associated with heart disease.

SHEETS + KPI SCREENSHOTS

The KPI cards provide a quick summary of the heart disease dataset by displaying key health indicators, including total patient records, heart disease cases, stroke cases, average BMI, high health risk patients, obese patients, and high lifestyle risk individuals. These metrics offer an overview of the dataset and support rapid assessment of disease prevalence and associated risk factors.

AGE CATEGORY ANALYSIS

Shows the distribution of heart disease cases across different age categories.

GENDER & RISK ANALYSIS

Compares heart disease prevalence between male and female patients.

SMOKING AND ALCOHOL ANALYSIS

Analyzes the relationship between smoking habits and heart disease occurrence.

STROKE ANALYSIS

Displays stroke cases among patients with and without heart disease.

BMI ANALYSIS

Shows the average BMI across different patient categories.

PHYSICAL ACTIVITY ANALYSIS

Shows the impact of physical activity on heart disease occurrence.

DASHBOARD FILTERS

Interactive filters allow users to dynamically explore heart disease data based on different health attributes.

Filters Used:

- Heart Disease
- Smoking
- Stroke
- Sex
- Age Category
- Physical Activity
- Diabetic

Dashboard filter controls including checkboxes for Male, Age Category, Smoking, Physical Activity, Alcohol Drinking, Diabetic, Avg. BMI, Gen Health, Sex, Race, and buttons for NEXT and HOME.

TABLEAU STORY

The Tableau Story presents the dashboard findings through multiple story points, helping users understand heart disease trends and risk factors in a structured and interactive manner.

DASHBOARD STORY

The Heart Disease Analysis Dashboard provides an interactive platform for analyzing patient health data through meaningful visualizations. The dashboard summarizes key health indicators using KPI cards such as Total Records, Heart Disease Cases, Stroke Cases, and Average BMI. Interactive charts analyze heart disease trends based on age category, gender, smoking habits, diabetic status, physical activity, and stroke history. Users can apply filters to explore specific patient groups and compare health conditions dynamically. The Tableau Story presents these insights in a logical sequence, making complex healthcare data easier to understand and supporting informed decision-making for healthcare professionals, researchers, and the general public.

GITHUB REPOSITORY

FINAL OUTPUT- Dashboard and Story To Tableau:

The screenshot displays a Tableau public profile for 'Thiragati Surya sri', a student. The profile includes a search bar, a banner, and a 'Customize Banner' button. Below the profile name, there are buttons for 'Edit Profile' and 'Create a Viz'. The 'Vizzes' tab is active, showing two published visualizations: 'Heart Disease Analysis -2' and 'Heart Disease Analysis -1'. Both visualizations are Tableau dashboards with KPI cards and interactive charts. The 'Heart Disease Analysis -2' dashboard shows KPI cards for Total Records (4,500), Heart Disease Cases (483), Stroke Cases (251), and Average BMI (29.34). It also includes charts for Gender-wise Heart Disease Analysis, Age-wise Heart Disease Analysis, Impact of Smoking and Alcohol on Heart Disease, and Physical Activity in Heart Disease Analysis. The 'Heart Disease Analysis -1' dashboard shows similar KPI cards and charts. The profile also shows 'Favorites 0', 'Following 0', 'Followers 0', and 'Stats'.
