

PROCESSING STEPS AND BUSINESS QUESTIONS

PROJECT NAME: Heart Disease Analysis using Tableau

BY: T .Surya sri

EMAIL ID: thiragatisruyasri@gmail.com

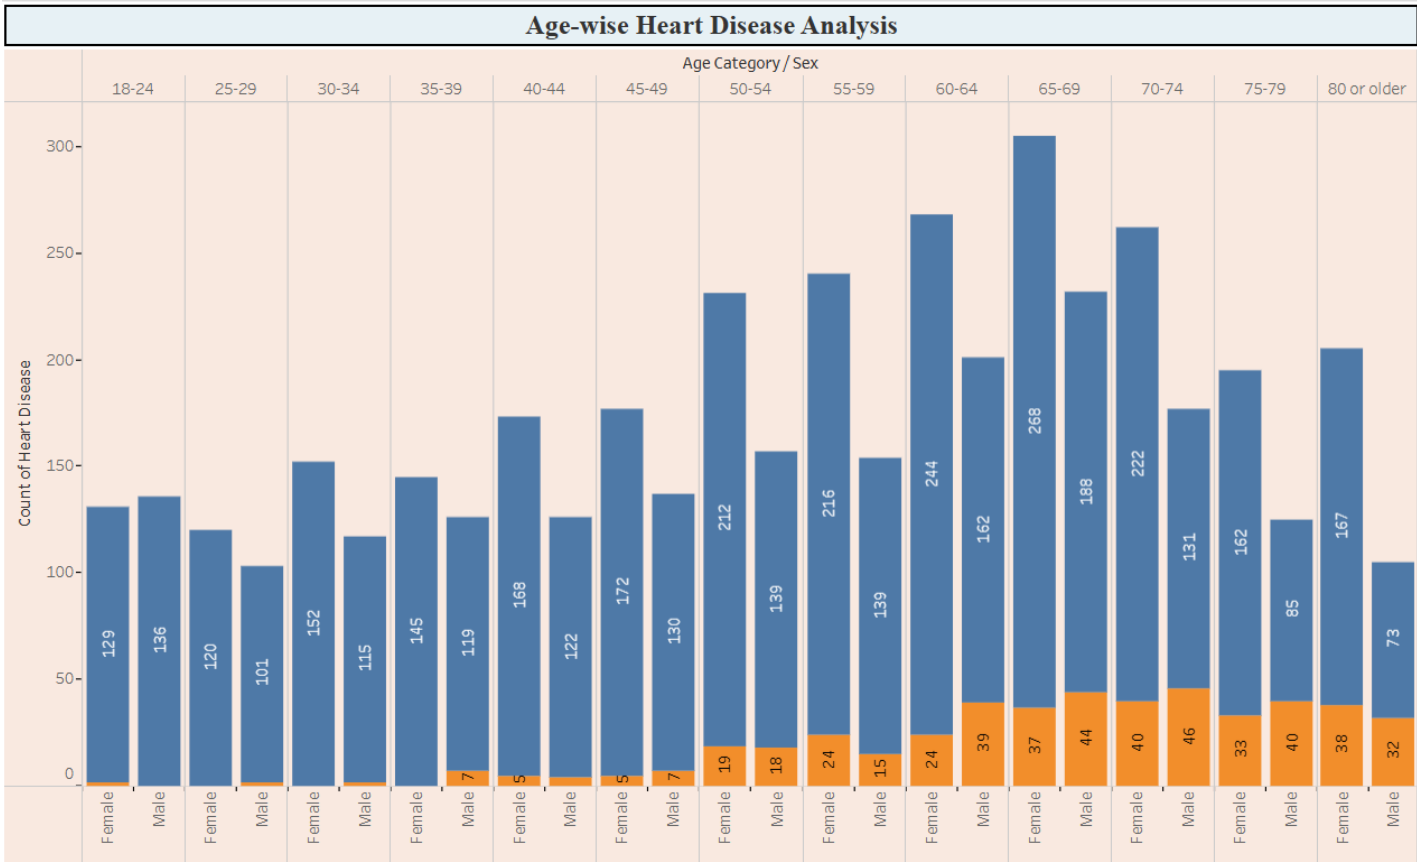

I CREATED A HEART DISEASE ANALYSIS DASHBOARD & THE PREPROCESSING STEPS INCLUDE:-

- 1. I first downloaded the Heart Disease dataset in CSV format.
- 2. I verified the dataset for missing values, duplicate records, and inconsistent data types.
- 3. I selected relevant healthcare attributes including Heart Disease, BMI, Smoking, Stroke, Physical Activity, Diabetic, General Health, Age Category, Sex, Race, Physical Health, Mental Health, Sleep Time, and Asthma.
- 4. I cleaned and formatted the dataset, created calculated fields, and developed interactive worksheets, dashboards, KPI cards, and Tableau Story using Tableau Desktop.
- 5. Finally, I published the Dashboard and Story on Tableau Public and integrated them into the Flask web application.

Business Questions

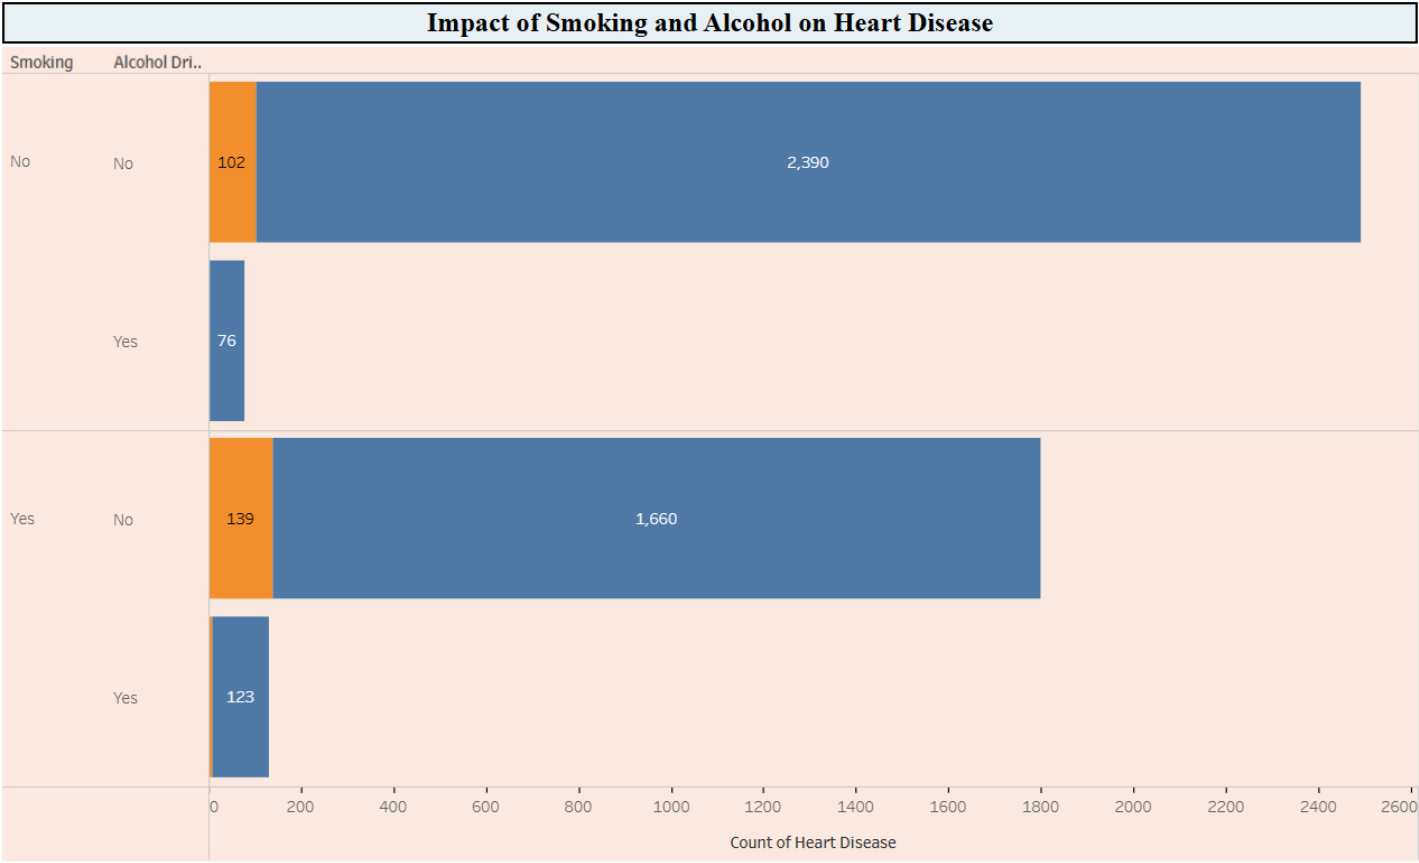

1. Which age category has the highest prevalence of heart disease?

Visualization Used: Age Category Analysis

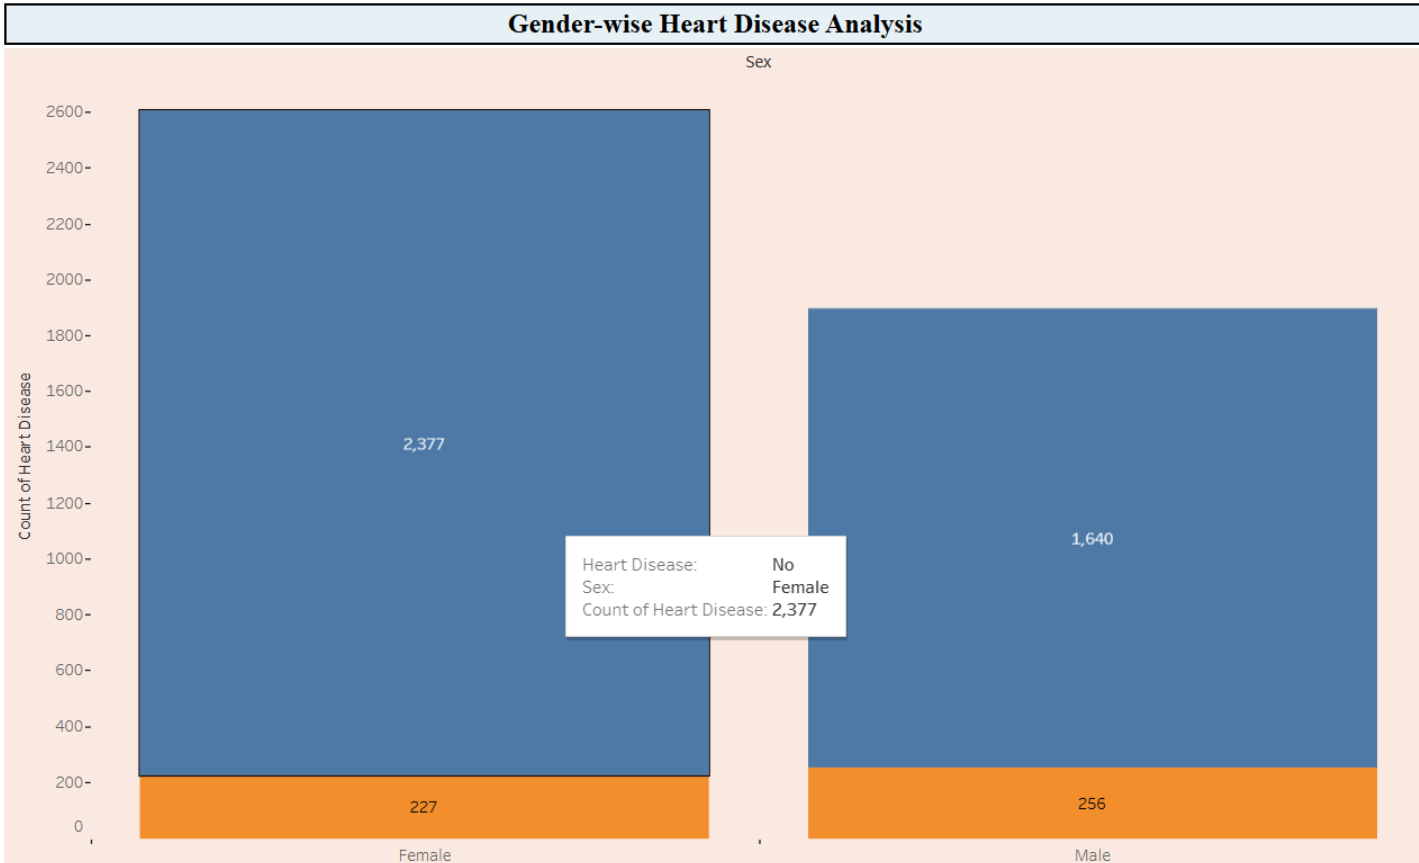

2. Does smoking significantly increase the risk of heart disease?

Visualization Used: Smoking Analysis

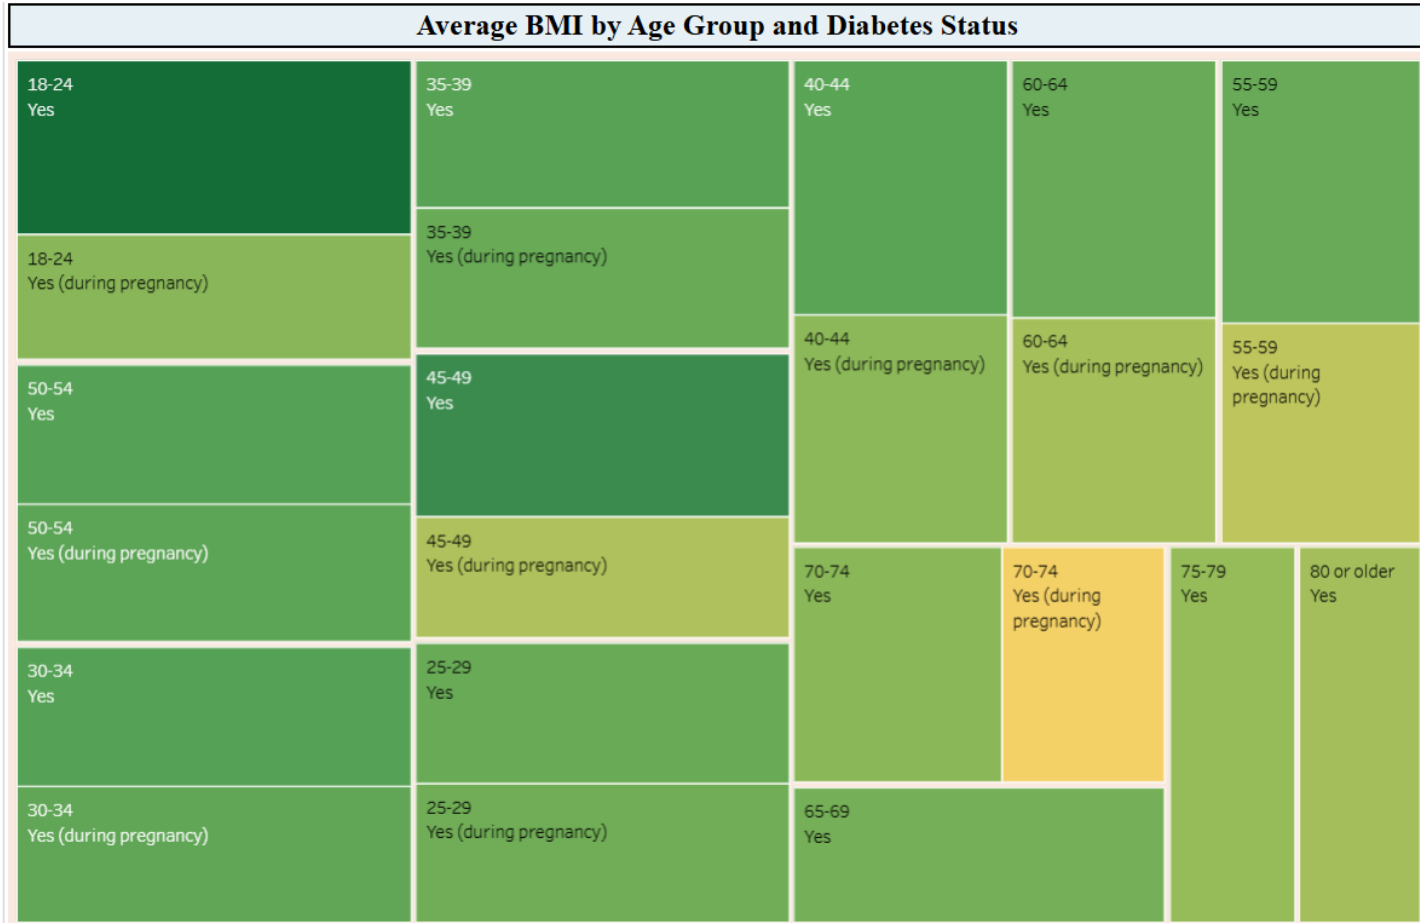

3. Which gender is more affected by heart disease?

Visualization Used: Gender Analysis

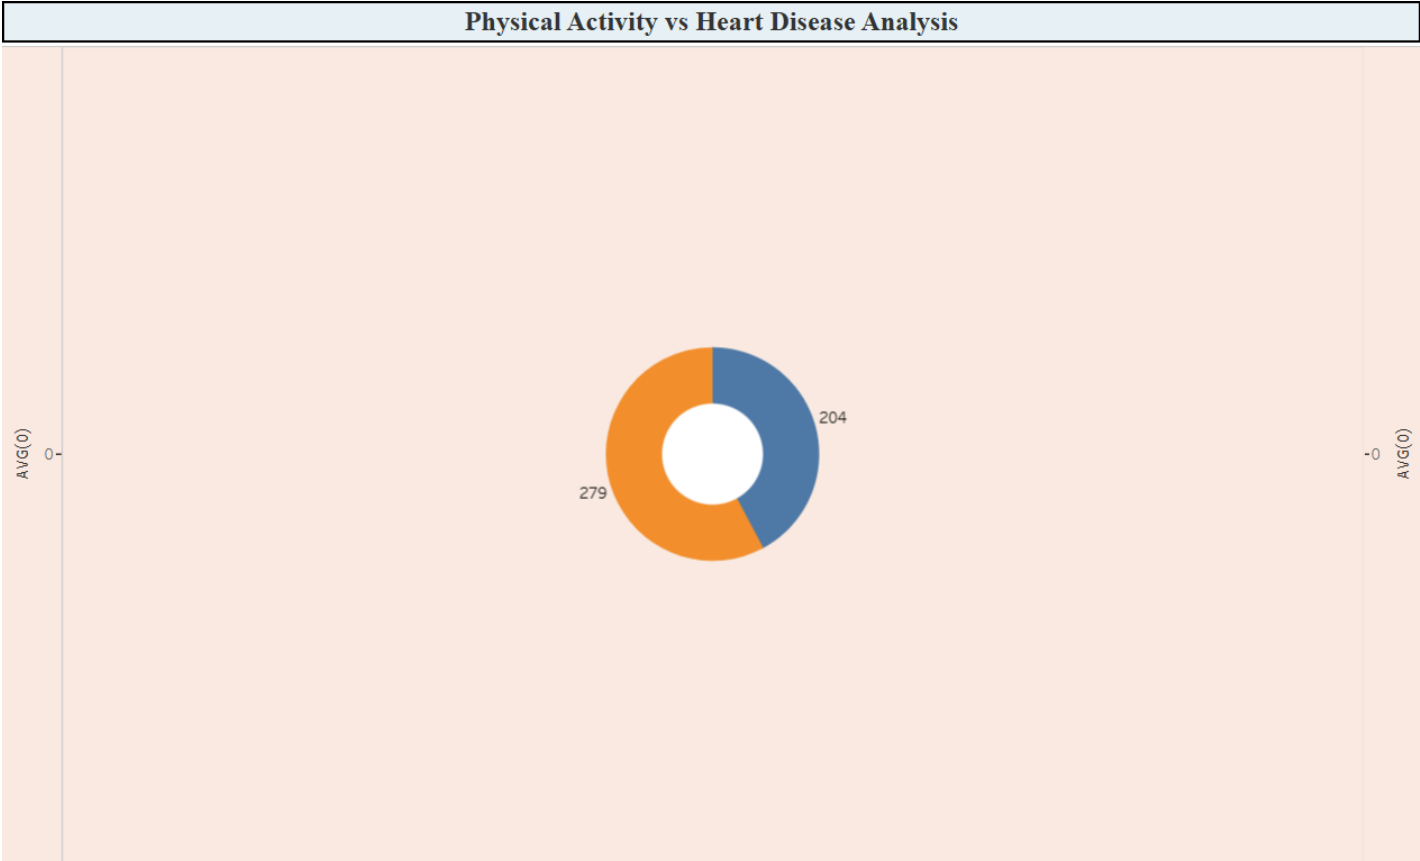

4. How does BMI vary among diabetic and non-diabetic patients?

Visualization Used: Age & BMI vs Diabetic

5. How does physical activity influence heart disease occurrence?

Visualization Used: Physical Activity Analysis

[illegible]
